

ONE WAY VISION VINYL

Basic Cleaning Instructions

Cleaning One Way Vision Window Graphics

The durability of the graphics depends primarily on whether an optically clear overlamine has been applied to the graphics. We strongly recommend conducting a test prior to cleaning.

1. Apply a solution of mild soap and water to a lint-free cloth; wring out any excess water. The cloth should be wet but not saturated.
2. If necessary, dry the graphics with a soft, dry, lint-free cloth.

The following are NOT recommended:

- * Using a solvent-based window cleaner (e.g., Windex) -- the solvents in the cleaner may weaken the film's adhesive properties. For this reason solvent-based cleaners should not be used to clean the glass prior to graphic installation or after the graphics have been installed.
- * Completely saturating the graphics with water, as this will fill the holes with water.
- * Using a squeegee to remove excess water -- a rubber squeegee may leave marks on the graphics.
- * Using the wiper blade on the rear window of a vehicle to remove water from rain that collects in the holes or after a car wash. Such water buildup can be prevented by using an overlamine on the graphics prior to installation so that the rain runs off the graphics. If the graphics have not been laminated, dry them using a soft, dry, lint-free cloth.
